Bsc/Information Systems/3rd-year

Bahir Dar

01/2024 – 06/2027

Bahir Dar, Ethiopia

SUMMARY

I am a third-year Information Systems student at Bahir Dar University with a strong focus on full-stack web and mobile development, with particular strength in front-end engineering. I have practical experience building responsive and component-based applications using modern technologies such as React, Tailwind CSS, and .NET, alongside mobile development using Flutter.

Proficient in JavaScript, Java, C#, PHP, and Dart, with hands-on experience in mobile application development using Flutter. Familiar with database systems including MySQL, PostgreSQL, MongoDB, and Firebase, with practical experience integrating frontend interfaces with backend services and real-time databases.

Project experience includes developing a Smart Queue Management System using Flutter and Firebase, implementing multi-service queue logic, admin controls, and scalable system design. Experience with containerization using Docker and applying basic DevOps practices for consistent development environments.

Foundational knowledge in Natural Language Processing (NLP), with an understanding of text data processing and AI integration concepts. Comfortable working with version control using GitHub and applying structured development workflows.

Strong problem-solving and communication skills, with a focus on writing clean, maintainable code and continuously improving technical competence in real-world development environments.

SKILLS

Web Application Development: ● ● ● ● ●

- **Frontend Tools:** HTML/CSS, React, Tailwind CSS

Building responsive, component-based user interfaces with modern styling workflows and reusable UI architecture.

- **Backend Tools:** Node.js (including Express.js), .NET

Developing RESTful APIs, handling server-side logic, and structuring scalable backend services.

Database Technologies ● ● ● ● ●

- **Primary:** MySQL

Designing relational schemas, writing optimized queries, and managing structured data.

- **Other Experience:** PostgreSQL, MongoDB, Firebase

Working with both relational and NoSQL databases, including flexible schema design and cloud-based data solutions.

AI / Machine Learning ● ● ● ● ●

- **NLP (Natural Language Processing)**

Working with text data for tasks such as basic language understanding and processing.

Mobile Application Development ● ● ● ● ●

- **Framework:** Flutter(.Dart)

Developing cross-platform mobile applications with a single codebase and responsive UI components.

Cloud & DevOps ● ● ● ● ●

- **Docker**

Containerizing applications to ensure consistent development and deployment environments.

- **Github & Git(Version Control)**

Skilled in using Git for source code management, including branching and version tracking in collaborative environments.

Soft Skills ● ● ● ● ●

- **Problem Solving & Debugging:** Strong analytical mindset with the ability to identify, troubleshoot, and resolve technical issues efficiently.

PROJECTS

Book Shopping System

Developed a Book Shopping System as part of a team project using C# in Microsoft Visual Studio Code. The application provides a user-friendly platform for browsing, searching, and purchasing books, with features such as category-based filtering, detailed book views, shopping cart functionality, and secure order processing. It also includes an administrative module for managing inventory, updating book records, and monitoring sales.

Key Steps:

- Designed system architecture and defined functional requirements collaboratively as a team
- Developed frontend and backend components using C# and .NET technologies
- Implemented core features including user authentication, search functionality, and shopping cart operations
- Integrated database management for storing books, users, and order information
- Tested and debugged the system to ensure performance, usability, and reliability
- Collaborated using version control to manage code and track progress throughout development

Smart Queue Management System

Mobile application for managing queues for service providers like clinics, banks.

- Built a **multi-service queue system** supporting independent queues for different service categories.
- Developed an **admin control module** for real-time queue monitoring and management.
- Implemented a **provider claim system** enabling service providers to manually accept and process tickets.
- Designed a **shared queue architecture** allowing multiple providers per service with scalable ticket distribution.
- Managed full **ticket lifecycle flow** (creation, waiting, active, completed) to ensure consistent queue state handling.
- Integrated backend services using Firebase (Authentication, Firestore) for real-time data synchronization.
- Developed the frontend using Flutter with state management handled via Riverpod.
- **Tech Stack:** Flutter (Dart), Firebase, Riverpod
